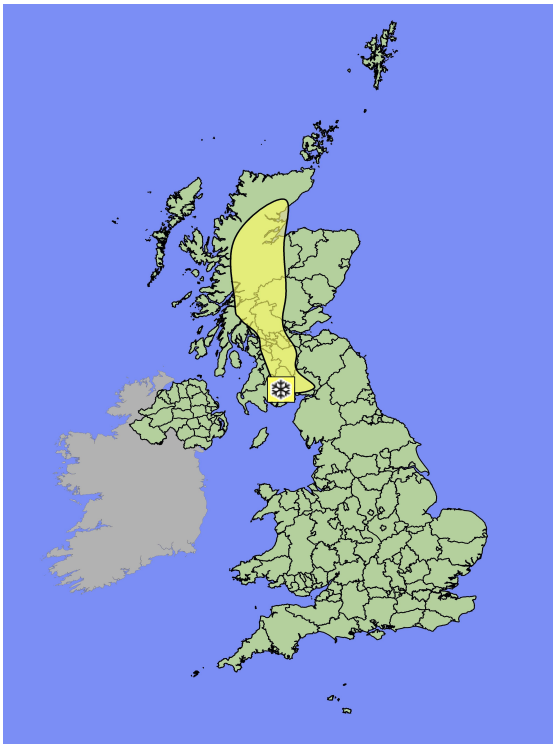
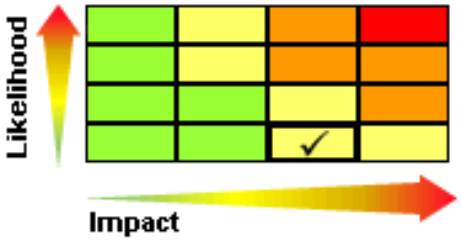
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system is expected to move eastwards into Scotland on Thursday. As precipitation encounters the cold air resident across the country it is likely to turn to snow. However, confidence in its eastward extent and intensity is relatively low so the public are advised to remain in touch with the latest forecasts. This warning is likely to be updated on Thursday morning.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **15:00 on Thu, 07th Feb 2013** until **23:59 on Thu, 07th Feb 2013**

An area of sleet and snow will move eastwards across western then central Scotland later on Thursday. The snow will be mostly light but persistent and will gradually settle inland well away from the west coast. Over the lowest ground just some slight slushy deposits of up to 2 cm, but over upland areas above around 200 metres, 5 cm developing in places. The public should be aware of possible disruption to travel.
